## DETAILED ACTION

### *Amendment*

1. Acknowledgement is made of Amendment filed 26 March 2003.

### *Allowable Subject Matter*

2. Claims 1-3 and 8-16 are allowed.
3. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach a device for recording information by means of imaging with the aid of at least one light-sensitive sensor with a two-dimensional sensor surface, the device comprising a first mode, in which a plurality of images of a surface are recorded by the sensor through the adjustable lens means at a first focus position which provides projections of images of the surface onto the sensor when the device is directly adjacent the surface more accurately than at a second focus position, each image of the plurality of images containing content which partially overlaps content of another image of the plurality of images, such that the overlapping contents of the images are utilized by the device to put together the images into a composite image.

Sohaei et al. (US 5,430,558; hereinafter "Sohaei") teaches a hand-held device for recording information by means of imaging with the aid of at least one optical sensor, wherein the device is adapted to abut against and be passed over a surface for imaging the same by means of a plurality of images; and stores information in character coded format which serves as the first mode.

Kumagai et al. (US 6,435,413; hereinafter "Kumagai") teaches an optical reader having a single-scanning mode (which serves as the first mode), wherein in a single-scanning mode the

reader touches the surface bearing the barcode during the code reading process; and a multi-scanning mode wherein in the multi-scanning mode the reader reads the barcode at a distance. However, Kumagai fails to teach that the first-mode/single-scanning-mode having a plurality of images of a surface are recorded by the sensor through the adjustable lens, wherein each image of the plurality of images containing content which partially overlaps content of another image of the plurality of images, such that the overlapping contents of the images are utilized by the device to put together the images into a composite image.

Dvorkis et al. (US 5,369,262; hereinafter "Dvorkis") teaches an electronic stylus type optical reader having contact and non-contact reading modes.

However, Sohaei, Kumagai and Dvorkis, taken alone or in combination thereof, fails to teach that the first-mode/single-scanning-mode having a plurality of images of a surface are recorded by the sensor through the adjustable lens, wherein each image of the plurality of images containing content which partially overlaps content of another image of the plurality of images, such that the overlapping contents of the images are utilized by the device to put together the images into a composite image.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
